GUARDIAN PLATFORM BRIEF

Guardian Security Operations

Customer-safe operational security visibility without forcing customers into vendor consoles.

INTENDED AUDIENCE	Security leaders, SOC stakeholders and managed-service customers
PUBLICATION STATUS	Included in Guardian Managed Defence; service coverage requires commercial confirmation

One security operations workspace

Guardian Security Operations brings approved alerts, investigations, log health, vulnerability posture and security reports into a consistent customer experience. Underlying technologies remain connectors and data sources rather than separate customer products.

Customer experience

- Overview with independently loading operational modules
- Customer-scoped alerts and investigations
- Log-source health based on persisted data
- Vulnerability posture and remediation deep links
- Approved security reporting records
- Truthful empty states when a source is not configured or has no data

Safe by design

- No raw upstream payloads, secrets or credentials in customer views.
- No browser-controlled tenant authority for provider workflows.
- No inferred customer attribution without confirmed source evidence.
- No fabricated log-health periods, investigation fields or report artefacts.

Damocles delivery

Damocles can combine the Guardian experience with managed threat detection, investigation and remediation support. Exact coverage, response commitments and service levels must be defined in the applicable proposal and agreement.
